PGY-5 Rotations
Competency Based Goals and Objectives

The goals of the third year of the pediatric neurology residency program are to provide elective time allowing focused exposure and learning in specific subspecialty areas of neurology and pediatric neurology. The following elective rotations are *strongly* recommended to prepare residents for independent practice: EEG/EMU, EMG/NCS/neuromuscle, neuroradiology, and neuropathology. Residents will have the opportunity participate in a research project and will maintain a pediatric neurology outpatient continuity clinic throughout the year. Objectives for each elective rotation can be found on the neurology website at neuro.wustl.edu
